

Performance Optimization **LIFE 2 IMPROVE**

BOOK YOUR PERFORMANCE COACH

CONSULTING ON HOW TO INCREASE THE EFFICIENCY OF BOTH IN-HOUSE AND THIRD-PARTY SYSTEMS, BASED ON AUDITS, ANALYSES AND TROUBLESHOOTING.

IMPLEMENTATION OF THE DEVELOPED OPTIMIZATION/UPGRADE STRATEGY: FROM ADJUSTING THE OPERATING PARAMETERS, TO UPGRADING SOFTWARE AND/OR HARDWARE, TO REPLACING COMPONENTS OR EVEN THE ENTIRE SYSTEM.

Production optimization (GAW units)

The main focus is on the analysis of the process parameters, their evaluation and subsequent optimization.

If possible, the increase in performance is achieved without (or only through minor) changes to the existing system components.

The employees are sensitized and trained accordingly to ensure an enduring improvement.

Process and system optimization (GAW and third-party systems / external installations)

The main focus is on the analysis of the system components, the software and the technology used.

It is checked whether the system still corresponds to the state-of-the-art and whether the applicable laws and guidelines are complied with.

On this basis, measures for system optimization are developed. Correspondent suggestions (from retrofit to APC solutions to replacement - depending on the customer's wishes) are elaborated, economically examined and presented.
